

AI systems for missions that **can't afford to be wrong**

For **26 years**, Ideation has transformed ideas into realities for federal agencies — from the analysis tools programs depend on daily to the agentic platforms now extending them. Governed data access, enterprise data & analytics, and evidence-linked AI.

DHS

SMALL BUSINESS AWARD FY2019

WHAT WE BUILD

Governed intelligence, not generic chatbots

01 – AGENT PLATFORMS

Orchestrated intelligence

Multi-agent systems that plan, call authoritative tools, stream their reasoning, and adapt to your domain — managed service or embedded in your stack.

02 – GOVERNED DATA ACCESS

Agents grounded in real data

A hardened federation layer connecting AI to federal, state, and local sources of truth — consistent contracts and error handling, proven in production.

03 – DOMAIN APPLICATIONS

AI that understands the mission

Compliance review, grant analysis, hazard intelligence, and document-corpus reasoning — with source traceability and authority separation.

04 – MISSION-CRITICAL TOOLS

We build what programs run on

Production applications practitioners rely on daily. We build, maintain, and evolve the systems your programs depend on.

05 – DATA ENGINEERING & ANALYTICS

From raw records to live decisions

Lakehouse & ETL/ELT pipelines, Power BI & Tableau dashboards, geospatial services, and enterprise data-warehouse modernization at national scale.

06 – APPLIED & RESPONSIBLE AI

AI you can put in front of a mission

Generative AI with hallucination controls, automated QA, and human-in-the-loop validation — deployed on agency-approved clouds.

INDEPENDENTLY LISTED BY DHS

Among the first small businesses to take enterprise generative AI from idea to deployment in a secure DHS AI environment

HMAi, our Hazard Mitigation Assistance AI including chatbots, data assistants, and operational efficiencies apps, is publicly listed in the official DHS AI Use Case Inventory at the **Deployment** stage — a multi-agent, self-correcting agentic harness providing data assistance and visualization with precise citations. dhs.gov/ai/use-case-inventory/fema

ON THE RECORD

“
Not everyone has the skill to understand your business, understand how to incorporate technology to solve the problem at hand, AND build a prototype to actually see the solution... Ideation does exactly this.

– DEPARTMENT OF HOMELAND SECURITY CLIENT

“
Deliverables... had no quality issues and were clear, concise, and precedent-setting. No weaknesses were observed.

– CPARS EVALUATION · AGENTIC AI · 2026

“
The contractor developed a new, innovative approach... while preventing increased ongoing costs.

– CPARS EVALUATION · DATA PLATFORM · 2025

Authoritative sources in. Accountable decisions out.

Transforming ideas into realities through technologies — agents draft and verify, people decide.

AUTHORITATIVE INPUTS

Federal & state regulations & policy

Local & municipal ordinances

Program policies & guidance

Grants, spending & program data

Agency enterprise systems & records

Geospatial & hazard layers

MISSION OUTCOMES

Defensible compliance findings, evidence-linked

Cost-effectiveness & benefit-cost analysis

Real-time decision intelligence & visualization

Mission-ready reports, auditable end-to-end

Self-correcting agent loops draft, check, and refine — but **people keep the final say where it counts**. Every output traces to its source, by architecture, not by promise.

OUR EDGE

What makes Ideation hard to copy

01 Authority, not guessing

Canonical rules stay separate from runtime projections. Every decision traces to a source — built for environments where **being wrong is unacceptable**.

03 Multi-cloud, multi-model

Model-agnostic routing across leading AI providers, on Azure and Google Cloud. **No single-vendor lock-in**.

05 We build the tools the field uses

Long-term ownership of mission-grade applications — from widely used federal analysis tools to the agent platforms that extend them.

02 Platform, not project

New missions deploy on a shared engine, not a greenfield rewrite every procurement cycle. **We ship faster than competitors can start**.

04 Depth earned over decades

We speak program, not just Python. Grants, hazard mitigation, compliance, and geospatial intelligence are in our engineering DNA.

06 Cross-agency proof

Twenty-six years across six federal departments — software, BPR, and training — with agentic AI deployed at one department and underway at the next.

SELECTED OUTCOMES — DETAILS UNDER NDA

Agentic AI assistants — deployed

Multi-agent, self-correcting agentic harness for data assistance and visualization — **publicly listed in the DHS AI Use Case Inventory**.

Federal hazard-mitigation program

AI-assisted grant compliance review cutting analyst cycle time with **full evidence traceability**.

Generative-AI grant operations

Policy-aware interfaces and intelligent workflow automation across **all ten regional offices**.

Federal analytics-platform modernization

Nationwide data ecosystem on a modern lakehouse — **enterprise-wide users directing \$10B+ in grant requests**.

Benefit-cost analysis tooling

11 production releases in a single year of a widely used federal application — OMB policy updates with CI/CD on Azure.

Emergency-management intelligence

Multi-hazard geospatial AI for decision support — work an evaluator called a **“high benchmark.”**
